

QKS-v2 Speedup vs ViT4Mal 810 ms [2] (Full Application Latency — same measurement scope)

Full Application Latency = JPEG file $\rightarrow$ decode $\rightarrow$ resize $\rightarrow$ normalize $\rightarrow$ patch $\rightarrow$ quantize $\rightarrow$ DMA $\rightarrow$ FPGA $\rightarrow$ readback $\rightarrow$ argmax.
Same measurement scope as ViT4Mal [2] Table 13. QKS-v2: 18.53-18.82 ms. ViT4Mal fastest: 810 ms. Conservative claim: >30 $\times$.
